

Connectivity

Leverage 125+ low-latency, in-process market data and order entry feed handlers

MayStreet delivers low-latency, in-process market-data and order entry connectivity software to 125+ execution venues. Designed to be flexible and transparent, it provides the same interface for real-time and historical data, built from the ground up on a modern technology platform specifically designed for low-latency trading and data capture. Your firm no longer needs to be locked into highly siloed, restrictive, opaque technology.

All the Coverage You Need

We connect to 125+ execution venues in Americas, Europe and Asia for equities, futures, options and FX.

Best-in-Class Feed Handlers

In-process, high-precision market data feed handlers and order entry connectivity. Gain faster time to new markets with MayStreet.

Ultra-Low Latency

1-5us from NIC to built order book. When we say ultra-low latency, we mean it.

One Step Ahead

Managing protocol changes for many execution venues is a time consuming and error prone task. MayStreet ensures your connectivity is always up-to-date and accurate.

Transparency

Same interface for real-time and historical data capture for wide variety of supported inputs (FPGAs, NICs, packet-capture raw data). Complete access and transparency with an easy-to-use, open API.
